Map of Road Work

THE PROCESS

1. Apply asphalt emulsion sealant.
2. Apply stone chips to fill voids and improve skid resistance.
3. Drive over loose stones with rubber tired machines. (Leave in place for one week.)
4. Apply slurry seal.

The Schedule

The work is currently scheduled to start on May 23, 2016. The order of work for the chip seal is currently planned as West Ridge, Huron Farms/Orchard River Hills/Eaton Court, Dexter Crossing, Fourth, Fifth and Dexter Ann Arbor. Further schedule updates will be provided via the methods listed on this flyer.

Frequently Asked Questions

Will I lose access to my driveway?

There will be temporary (~30 minutes) disruptions to driveways during the placement of asphalt emulsion and seal coat.

Will I be notified when work will occur?

The Contractor will provide at least 48 hour notice prior to performing any work that will require driveway closures. Letters will be mailed or hand delivered to your home.

How will traffic be handled during construction.

At least one lane will be maintained at all times with flag control. Slight delays should be expected from this work.

What will I see during construction?

- The first process will be the placement of an asphalt emulsion. This will be sprayed on the existing pavement.
- This will be followed by the placement of small gravel which will be pressed into the asphalt. This will remain in place for approximately one week.
- A final seal coat will be placed over the asphalt which will seal the gravel in place and provide a black, asphalt like appearance.

How will the surface be different?

The cape seal surface is rougher than conventional asphalt due to the gravel.
